

Masonry Heaters

Masonry heaters are the most efficient and cleanest way to use wood to heat an energy efficient home. Masonry heaters store all the heat energy generated from a single 60 to 90 minute 2000 degree F wood-firing and then slowly release all this stored heat energy over a 12 to 48 hour period depending on the masonry heater design. Masonry heaters can also provide black or white food baking ovens.

We endorse and highly recommend **Norbert Senf's Heat-Kit** masonry heater, **Jeremiah Church's** Boreal Heat LLC and the international Masonry Heater Association:
